

Moosehead Cedar Log Homes Teams with Sansin for Green Building.

Sansin is proud to announce that Moosehead Cedar Log Homes (MCLH) has chosen Sansin Enviro Stains to protect and beautify their line of cedar log homes.

“Moosehead Cedar Log Homes has a strong reputation for their creative architecture and fine craftsmanship. It is a genuine pleasure to partner with an organization who demonstrates a strong commitment to the environment and who closely shares Sansin’s core values and visions for home building,” says Sjoerd Bos, Vice President of Sansin.

MCLH Corporate Sales & Design Office – Greenville, Maine

There were many key factors that contributed to Moosehead Cedar Log Homes’ decision to choose Sansin to sustain the beauty and durability of their homes. Moosehead Cedar Log Homes ships houses throughout the United States; therefore Sansin’s superior performance in the harsh northern Maine winters as well as the extreme UV exposure in the southern states was a major factor in MCLH’s decision.

Randy Comber, Owner of MCLH says, “For years, even before there was LEED, and other green building certification programs, our organization has been doing everything possible to be eco-friendly. As we move toward certification for the company, it only made sense to partner with Sansin. For 20 years, Sansin Enviro Stains have been offering environmentally friendly, low-VOC products designed specifically for log homes.”

MCLH Mountaineer Design – June Home Feature

Randy adds, “This is not our first partnership with Sansin. We are currently working on My Green Log Home with Sansin Enviro Stains. MCLH has been chosen to produce the kit and Sansin will be providing the finish for this green log home project.”
