

The warm beauty of wood enriches our lives. Its natural charm inspires the imagination and its rich texture rewards the touch. But wood is organic – it needs to be protected. In nature, trees are protected with bark. Now you can protect just as naturally with Sansin Enviro Stain.

THE SCIENCE BEHIND HEALTHY WOOD

Wood is a tremendously versatile material – and as long as it’s protected, a strong and durable one. Water, ultraviolet (UV) rays and fungi can all seriously damage your wood. Sansin offers protective formulas that let wood “breathe” more freely, improving dimensional stability and allowing wood to adjust naturally to moisture levels in the environment. Sansin forms a monolithic bond with your wood that aggressively repels condensed water.

based coatings can be easily damaged by exposure to UV radiation – just 5 hours of direct sunlight can reduce their water repellency dramatically. Sansin’s modified natural oils and resins are impregnated with special UV protectants so every exposed cell of your wood is protected. Because of their unique formulation, Sansin Eos™ and Sansin Ardera™ also help protect naturally against wood rot.

Sansin Enviro Stains are designed to keep your wood healthy – just as Mother Nature intended. Whether it’s your home, your deck or your furniture, Sansin provides the long-lasting, beautiful protection your home deserves.

*Water-based vs. solvent-based formulations. Wood Science Faculty, U of T / Jan. '02

Every wood coating needs to be maintained. It’s just easier with Sansin. Where some coatings can darken and peel, Sansin is designed to wear gently over time. Keeping your home protected involves only a simple cleaning and maintenance coat, applied as needed.

Sansin Eos and Ardera are both low-odor, easy to use and easy to maintain. But even more importantly, they’re easy on the environment. Our commitment to conservation is paramount and is reflected both in our products, and our business practices.

Sansin Enviro Stains will protect the natural beauty of your home – and our world – for generations to come.

DECKS & EXTERIORS

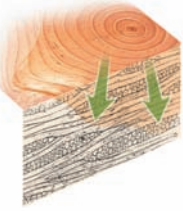

Naturally Perfect®

BEAUTY THAT GOES BELOW THE SURFACE

Should you protect your house with a water or an oil-based coating? With Sansin Enviro Stains, you can have either, or the best of both worlds. Modified natural oils and resins are carried onto the wood’s cell structure using one of nature’s commonplace miracles – water. As the water evaporates, Sansin bonds directly with the wood substrate to form a tough, durable barrier.

Our unique formulas offer every level of protection – from penetrating natural finishes, to high-gloss barrier coatings – so you can match the look of your Enviro Stain with the protection your project needs. If you’re looking to protect and enhance the beauty of your siding, deck, furniture or millwork, Sansin Eos™ and Ardera™ will be sure to surpass expectations.

The idea of protecting wood with nature’s own ingredients is almost as old as wood itself. More than a thousand years ago, the ancient peoples of Norway took resin and gums from the heartwood of trees, warmed it and applied it to their Stave Churches with a broom. Those buildings are still standing. Sansin Eos and Ardera are designed using the same principles.

With Sansin Enviro Stains, not only can you protect wood naturally – you can also invite the beauty of nature into your life. Our collection of unique colors is inspired by the stunning beauty of our natural world. No matter what color you choose, the exceptional clarity of Sansin will bring the define the character of your wood and bring it to life.

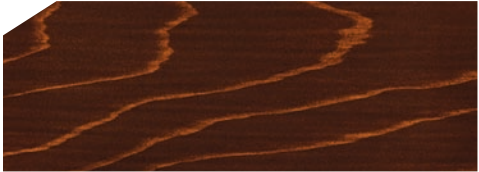

WATER-BORNE WOOD FINISH

With just one or two coats, Sansin Eos™ provides tough, effective protection for bare wood, including sidings, logs, decks and fences. Specially formulated oils and resins protect the wood, resulting in a beautiful low-lustre finish that delivers outstanding protection against moisture, weathering, and UV. Due to its high solids and unique water-borne alkyd technology Eos is exceptionally easy to apply and maintain, ensuring a perfect finish every time. Crisp, clear color means that Sansin Eos dramatically enhances the natural beauty of any wood project. For additional lustre and protection, apply a final coat of Sansin Ardera.

NATURALS Highlight the natural beauty of wood with our pre-tinted colors.

Color may vary depending on the texture, grain, color, porosity and type of wood and may not be exactly as illustrated.

HIGH-LUSTRE WOOD FINISH

Sansin Ardera™ is a durable two-coat water-borne finish that can be applied to virtually any surface – including millwork, siding, decks and even to improve the performance of other coatings. That’s because Ardera is self-priming and offers exceptional adhesion to almost any surface, resulting in a satin or gloss finish of exceptional beauty. Ardera is highly resistant to wear, doesn’t discolor over time, and provides some of the toughest UV protection available. Whatever your project, the exceptional characteristics of Ardera – in either natural, translucent or saturated finishes – will raise it to a new standard of beauty and durability.
